Nanotube Superfiber Materials: Chapter 6. Wet Spinning of CNT-based Fibers (Micro and Nano Technologies)

Simon Jestin, Philippe Poulin

Nanotube Superfiber Materials: Chapter 6. Wet Spinning of CNT-based Fibers (Micro and Nano Technologies) Simon Jestin, Philippe Poulin

Recent developments in the field of carbon nanotube (CNT)-based wet-spun fibers are described in this chapter. Wet spinning essentially enables a wide variety of polymers to be spun into fibers. It has been used to produce composite fibers composed of polymers loaded with CNTs, and even fibers solely composed of CNTs. Fibers obtained by wet-spinning approaches contain highly aligned CNTs making the fibers suitable for use in a variety of textile, cable and composite applications. Exciting results have been achieved at the laboratory scale. Today it is critical to consider scale-up of production of such superfibers so that applications can be fully validated.

From reader reviews:

Irene Delong:

In this 21st century, people become competitive in every way. By being competitive today, people have to do something to make these individuals survive, being in the middle of typically the crowded place and notice by simply surrounding. One thing that occasionally many people have underestimated the idea for a while is reading. Yes, by reading a publication your ability to survive boost then having chance to stand up than other is high. For you who want to start reading the book, we give you that Nanotube Superfiber Materials: Chapter 6. Wet Spinning of CNT-based Fibers (Micro and Nano Technologies) book as beginning and daily reading book. Why, because this book is usually more than just a book.

Linda Doyle:

Often the book Nanotube Superfiber Materials: Chapter 6. Wet Spinning of CNT-based Fibers (Micro and Nano Technologies) will bring you to definitely the new experience of reading any book. The author style to describe the idea is very unique. If you try to find new book to learn, this book very ideal to you. The book Nanotube Superfiber Materials: Chapter 6. Wet Spinning of CNT-based Fibers (Micro and Nano Technologies) is much recommended to you to study. You can also get the e-book from the official web site, so you can more easily to read the book.

Lillie Stein:

Is it a person who having spare time subsequently spend it whole day by watching television programs or just resting on the bed? Do you need something new? This Nanotube Superfiber Materials: Chapter 6. Wet Spinning of CNT-based Fibers (Micro and Nano Technologies) can be the reply, oh how comes? A book you know. You are thus out of date, spending your spare time by reading in this completely new era is common not a geek activity. So what these publications have than the others?

Jacquelynn Laverty:

Reading a publication make you to get more knowledge as a result. You can take knowledge and information from a book. Book is prepared or printed or outlined from each source that filled update of news. Within this modern era like currently, many ways to get information are available for you actually. From media social like newspaper, magazines, science publication, encyclopedia, reference book, book and comic. You can add your understanding by that book. Ready to spend your spare time to open your book? Or just seeking the Nanotube Superfiber Materials: Chapter 6. Wet Spinning of CNT-based Fibers (Micro and Nano Technologies) when you required it?
