**Applied Digital Optics: From Micro-optics to Nanophotonics** Bernard C. Kress, Patrick Meyrueis  
Miniaturization and mass replications have begun to lead the optical industry in the transition from traditional analog to novel digital optics. As digital optics enter the realm of mainstream technology through the worldwide sale of consumer electronic devices, this timely book aims to present the topic of digital optics in a unified way. Ranging from micro-optics to nanophotonics, and design to fabrication through to integration in final products, it reviews the various physical implementations of digital optics in either micro-refractives, waveguide (planar lightwave chips), diffractive and hybrid optics or sub-wavelength structures (resonant gratings, surface plasmons, photonic crystals and metamaterials). Finally, it presents a comprehensive list of industrial and commercial applications that are taking advantage of the unique properties of digital optics.

*Applied Digital Optics* is aimed primarily at optical engineers and product development and technical marketing managers; it is also of interest to graduate-level photonics students and micro-optic foundries.

- Helps optical engineers review and choose the appropriate software tools to design, model and generate fabrication files.
- Gives product managers access to an exhaustive list of applications available in today's market for integrating such digital optics, as well as where the next potential application of digital optics might be.
- Provides a broad view for technical marketing managers in all aspects of digital optics, and how such optics can be classified.
- Explains the numerical implementation of optical design and modelling techniques.
- Enables micro-optics foundries to integrate the latest fabrication and replication techniques, and accordingly fine tune their own fabrication processes.

### **From reader reviews:**

#### **Della Bailey:**

Have you spare time to get a day? What do you do when you have much more or little spare time? Yes, you can choose the suitable activity to get spend your time. Any person spent their very own spare time to take a go walking, shopping, or went to the actual Mall. How about open or even read a book titled Applied Digital Optics: From Micro-optics to Nanophotonics? Maybe it is to be best activity for you. You realize beside you can spend your time along with your favorite's book, you can smarter than before. Do you agree with it is opinion or you have different opinion?

#### **Ines Patterson:**

Reading a e-book can be one of a lot of activity that everyone in the world enjoys. Do you like reading book thus. There are a lot of reasons why people love it. First reading a book will give you a lot of new info. When you read a publication you will get new information due to the fact book is one of various ways to share the information or even their idea. Second, looking at a book will make you more imaginative. When you studying a book especially hype book the author will bring that you imagine the story how the figures do it anything. Third, you may share your knowledge to other individuals. When you read this Applied Digital Optics: From Micro-optics to Nanophotonics, you can tells your family, friends as well as soon about yours e-book. Your knowledge can inspire average, make them reading a publication.

#### **Denise Dennis:**

Spent a free time for you to be fun activity to perform! A lot of people spent their down time with their family, or their very own friends. Usually they performing activity like watching television, about to beach, or picnic within the park. They actually doing same task every week. Do you feel it? Would you like to something different to fill your own free time/ holiday? Could possibly be reading a book may be option to fill your free of charge time/ holiday. The first thing that you'll ask may be what kinds of guide that you should read. If you want to consider look for book, may be the e-book untitled Applied Digital Optics: From Micro-optics to Nanophotonics can be fine book to read. May be it might be best activity to you.

#### **Jose Suh:**

Reading can called head hangout, why? Because when you find yourself reading a book specially book entitled Applied Digital Optics: From Micro-optics to Nanophotonics your head will drift away trough every dimension, wandering in most aspect that maybe unfamiliar for but surely might be your mind friends. Imaging every word written in a e-book then become one form conclusion and explanation which maybe you never get just before. The Applied Digital Optics: From Micro-optics to Nanophotonics giving you an additional experience more than blown away the mind but also giving you useful facts for your better life with this era. So now let us show you the relaxing pattern at this point is your body and mind is going to be pleased when you are finished reading it, like winning an activity. Do you want to try this extraordinary

spending spare time activity?
